EMPLOYMENT

Junior Software Developer - iXperience

Feb 2019 - Current

- Build, maintain, and expand monolithic Ruby on Rails web app
- Test features and fixes using RSpec, FactoryBot, and CircleCI
- Deploy to Heroku
- Interface with Honeybadger to track errors
- Follow agile software development principles where relevant
- Upgraded app from Rails 5.1 to 6.0 to keep up to date with framework improvements and security fixes
- Added role-based authorisation to restrict what users and admins could see and do in order to keep in line with privacy and security policies
- Updated and expanded integration with HubSpot CRM to track and manage community portal users
- Expanded SQL-based Google BigQuery data warehouse to combine data from separate, older databases with production data in order to facilitate data analysis in Google Data Studio
- Added API for integration with YouCanBook.me to keep track of rescheduled and cancelled student interview calls
- Performed technical phone screens with potential new developer hires to allow Head of Engineering to focus on in-person technical white board interviews

Educational Technologist - Siyavula

Dec 2017 - Dec 2018

- Transformed maths questions and solutions written by pedagogy specialists into python code and XML, which were used to generate the content shown to students
- Maintained and added to a growing library of tools used to transform questions and solutions into code
- Authored a template creator that built out a skeleton of the files, and their contents, needed to create questions and solutions
- Technologies/languages used: python 2.7, XML, git, LaTeX, TikZ, and PGFplots
